

Census Data Notes

The CEDA data portal includes data from two rounds of Census in 2001 and 2011. The data has been obtained from the various Census table series such as age, area, households and populations, marital status, education, workers and primary census abstract. The data is available at all India, state and district levels, by caste as provided by the official sources. With the absolute numbers which are provided, the user can download the series and calculate percentages using the raw numbers or can also obtain percentages on the portal itself based on the facet (such as sector, caste or religion).

More information about the census data can be obtained on this [website](#).
