

ASI Data Notes

The Annual Survey of Industries (ASI) is the principal source of industrial statistics in India. It provides statistical information to assess and evaluate, objectively and realistically, the changes in the growth, composition and structure of the organized manufacturing sector comprising activities related to manufacturing processes, repair services, gas and water supply and cold storage. The CEDA data portal has yearly data from 1998-99 to 2019-20 at all India and the state level on a variety of indicators such as factories in operation, average age of the enterprise, working personnel, wages of the working personnel, assets and liabilities of the factories. Price data is available at current and constant prices (with the base year as 2011).

More information about ASI data and the raw data can be accessed [here](#).
